Abstract of **JP 55124449 (A)**

PURPOSE:To rear, store, and grow purchased vegetables, and to maintain the taste and nutrition for a long time, by making the circulating air in the case for storing vegetables pass by the leaves and then roots.

CONSTITUTION:The dry ice 7 is inserted in the hollow of the heat insulating material 2 above the motor 4 of the vegetable rearing case 1, and the suction hole 8 is provided between the case 1 and the dry ice 7. The air 9 from the hole 8 is made to pass by the surface of the dry ice 7, and the outlet 10 is formed above the surface of the water supply 6. The motor 4 is run to agitate and flow the air in the case 1 by the fan 3 in the direction of arrow 22, and the open air from the hole 8 enters the case while in contact with the dry ice 7. The air 22 stirs the air cooled by the ice 20, passes by the leaves of the vegetables 12 in the forward circuit and then the roots in the return.
